N-MBD-10-NH4

Mixed bed resin, condensate polishing grade, ammonium & hydroxide form (navy spec)

ResinTech MBD-10-NH4 is a 2:3 volumetric mixture of CG8-NH4-BL (a dark-colored ammonium form cation resin) and SBG1-OH (a hydroxide form type 1 strong base anion resin). The volume ratio is close to 1:1 on an equivalent basis and the component resins are chosen to separate easily for regeneration. MBD-10-NH4 is intended for use in mixed bed applications such as condensate polishing that require an ammoniated cation component.
